Because **cell performance and safety are crucial** in automotive applications, major attention should be paid to **non-counterfeiting, high-quality** and **reliable cathode materials** when ordering e-buses.

LICENSED LFP (LITHIUM IRON PHOSPHATE) OFFERS:

- ✓ Safety, due to the stability of LFP even under extreme conditions,
- ✓ Reliability, thanks to extensive Quality Control in licensed plants,
- ✓ Sustainability, because of the availability and non toxicity of Fe compared to Co,
- ✓ Versatility, as LFP is available in high-power or high-energy grades.

SECURE YOUR FREEDOM TO OPERATE

The manufacturing and the sale of LFP is strictly protected by a worldwide license from LiFePO_4+C Licensing AG.

The production, the use of LFP and the use of any applications with LFP without license is an infringement that can have a major impact. The patent owners are allowed to claim for seizure for counterfeiting.

WHAT ARE THE RISKS OF SEIZURE FOR COUNTERFEITING OR DISTRRAINT-DESCRIPTION*?

The procedure of “distrainment-description” can greatly facilitate the proof of infringement. Descriptive seizure should be ordered by the competent court of the place where the alleged counterfeiting occurs.

The harmed patentee or his licensees turn to the court by petition to obtain that one or more experts are assigned to describe the counterfeit items and counterfeit means with their owner. This owner may be prohibited to dispose of the matters described.

* “Distrainment-description” means a procedure by which any person entitled to bring an action for infringement may, after obtaining a Court order, granted on his application, cause a detailed description to be made, at the premises of the alleged infringer, by a bailiff assisted by experts, of the processes in question with or without actual distrainment.
